Paper-Shredding Also Available

City of Rocklin - News Details

Paper-shredding will also be available at the e-waste events.

One of the best ways to reduce the risk of identity theft is to shred all documents containing personal/confidential information before discarding them. Shredding will be provided by Stay Safe Solutions, which complies with the highest industry standards for paper-shredding. The cost for paper shredding is \$6.00 per file box (12x12x18 inch).

For more information about this event call Recology & RecycleTECH at 916.221.2227.

NEW CONSTRUCTION GENERAL PERMIT

Changes in Storm Water Pollution Prevention Reporting Requirements

Attention Developers, Engineers and Contractors: The new Construction General Permit was ac September 1, 2009. The clock is ticking to get familiar with the new SWPPP and reporting requirements. Plus, there are some new acronyms to learn.

The new permit goes into effect on July 1, 2010, and there are filing deadlines on or before the If you missed the regional workshop held recently in Rocklin, you can view the presentation by on the following link to get some basic information about the changes:

Interwest PowerPoint Presentation Pollution Prevention Information for Contractors Central Valley Regional Water Quality Board Website

ADOPT-AN-INLET PROGRAM

Scout troops, classrooms, religious and service groups, families, and businesses...

You can help keep Rocklin's creeks, streams, and open space clean and healthy by volunteering to mark, monitor, and maintain a storm drain inlet in your neighborhood, near your business or school.

The City will supply you or your group with safety equipment. In return, you are asked to periodically report your activities. Download the following documents to start your adoption process.

- 🔁 Adopt-an-Inlet Request Form
- Adopt-an-Inlet Program & Volunteer Guidelines
- Adopt-an-Inlet Agreement Form
- 🔁 Adopt-an-Inlet Volunteer Release Form
- 🔁 Adopt-an-Inlet Volunteer Reporting Form

ANNUAL REPORT NOW AVAILABLE

Wondering what the City is doing to comply with its National Pollutant Discharge Elimination S_{y} (NPDES) stormwater permit? Curious about the status of the City's Stormwater Management Pl (SWMP)? Not sure what either of these are?

Then check out this year's NPDES Annual Report to find out! Chapters 1 and 2 are updates on the City's Public Education and Outreach and Public Participation. Chapters 3 through 6 report on the nuts and bolts of operational activities that ensure the City's ongoing compliance with our stormwater permit as regulated by the State Water Resources Control Board and authorized by the federal Clean Water Act.

Residential Programs & Rebates

For additional information or applications on any of the rebate programs please call the PCWA Customer Services Center at 530.823.4850.

The rebate programs are offered on a first-come, first-served basis and will continue until all funds are depleted. The approved rebate amounts will be credited to your water billing account. For technical information on the rebate products, go to the California Urban Water Conservation Council at <u>www.cuwec.org/products_tech.lasso</u>

High-Efficiency Clothes Washing Machine (HEW) Rebate Program (revised 1/1/2010). This program offer is for a rebate of \$150 to replace older clothes washing machines with a new EPA

Water Sense clothes washing machines with a new EFA Water Sense clothes washing machine that has a CEE Tier 3 water factor. This new program takes effect on January 1, 2010. **CEE Tier 3 contains the most efficient washing machines; Tier 1 and Tier 2 do not qualify for the rebate.** For more details and a list of qualifying clothes washing machines see: <u>www.cee1.org/resid/seha/rwsh/rwsh-prod.pdf.</u> PCWA applied for and received assistance from the United States Bureau of Reclamation (USBR) to conduct a Clothes Washing Machine Rebate Program. PCWA was awarded funding from the USBR and has approved a matching \$15,000 for a total program of \$30,000.

back to top

High-Efficiency Toilet (HET) Rebate Program. This program offer is for a rebate up to \$175 to replace older 3 gallons or more flush toilets with new 1.28 gallons or less high-efficiency toilets for all customers in the PCWA service area. The toilet rebate program is partially funded by a grant from the United States Bureau of Reclamation and the Regional Water Authority. HET toilets must be purchased after June 1, 2008 to qualify.

back to top

Ultra-Low Flush Toilet (ULFT) Rebate Program. A rebate up to \$125 is available for customers replacing older 3 gallons per flush or higher with new 1.6 gallons per flush toilets. This program is for a limited time. This program is a partnership with the Regional Water Authority, South Placer Wastewater Authority and the United States Bureau of Reclamation. ULFT toilets must be purchased after June 1, 2008 to qualify.

back to top

HotWaterDemandWholeHouseRecirculationSystemPilotProgramRebate.New!HotWaterDemandWholeHouseRecirculationSystemRebateRetrofitProgram.\$150rebatesare beingoffered for

every tank style hot water heater replaced with a Hot Water Demand Whole House Recirculation System. PCWA defines a Hot Water Demand Whole House Recirculation System as a tankless hot water heater, a pump system that quickly circulates hot water throughout the whole house and a thermal bypass valve. The pump can be located at the hot water heater or the furthest point from the hot water heater. The pump can be controlled by a timer, wireless remote control, motion sensor or by an on demand switch. The cold water is saved using a thermal valve at the furthest point from the tankless hot water heater, thus recirculating back into the cold water pipe. <u>Program Requirements</u>

back to top

Point of Use Hot Water Rebate Pilot Program. *New***! \$50** rebates are being offered for every Point of Use (POU) hot water heater installed. PCWA defines Point of Use hot water heaters as devices that are placed under a sink to bring instant hot water to the faucet. Normally these are 2-3 gallon devices and are plugged into an outlet.

Program Requirements

back to top

Lawn Replacement Rebate Pilot Program. New! Rebates are being offered for removal of maintained lawn* that is replaced with either nonwater consuming material (e.g., bark or mulch, rock, deck, synthetic turf, concrete, and permeable

concrete products) or low to moderate use plants. The maximum rebate is **\$300** per parcel and is applied as a credit to the account. The minimum amount of maintained lawn that must be replaced is 300 square feet. **Before**

beginning the Replacement Program, you must receive the information packet that contains the detailed terms and conditions of the program. In order to be eligible a pre-conversion site visit must be scheduled (before any lawn is removed).

A **\$300** rebate is given if the lawn is replaced with non-water consuming material (e.g., bark or mulch, rock, deck, synthetic turf, concrete, and permeable concrete products).

A **\$150** rebate is given if the lawn is replaced with low to moderate water-use plant selections (this includes all non-water consuming surface materials used in and around the plants). Low to moderate plant material shall be used and the plant coverage cannot exceed 50% of the landscaped area when fully mature.

Existing lawn Irrigation system plumbing must be removed/rendered useless or replaced with an approved low volume irrigation system if low to moderate plant material is installed in the newly landscaped area.

*Maintained lawn is considered grass that is regularly watered and mowed and in good condition.

Applicant must be a treated water customer of PCWA. Areas to be converted must be maintained lawn currently irrigated with treated water. Dead lawns will not be eligible for a rebate. The material(s) must be installed at the service address listed on the application. Rebates are for lawn replacement only. For additional information or applications please call the PCWA Customer Services Center at 530.823.4850.

Water-Wise House Calls: Our trained technicians will come to your home, business, apartment house or mobile home park and check for leaks and give you customized water-use tips, outdoor irrigation check-ups and provide watering schedules. To schedule an appointment call PCWA Customer Services at 530.823.4850 or 800.464.0030.

During the call we will:

- Evaluate the efficiency of the irrigation system.
- Provide an irrigation watering schedule.
- Identify irrigation leaks, broken or mismatched sprinkler heads, high pressure and other common problems.
- Provide water efficiency program materials and water-wise landscaping tips.
- Check the toilets for leaks and replace toilet flapper valves, if needed, and requested.
- Install water efficient shower heads and faucet aerators if needed and

requested.

PCWA Water Use Efficiency Team

Commercial Programs & Rebates

"Commercial" sites include: businesses, schools, government facilities, parks, hotels, restaurants, and churches.

For additional information or applications on any of the rebate programs please call the PCWA Customer Services Center at 530.823.4850.

The rebate programs are offered on a first-come, first-served basis and will continue until all funds are depleted. The approved rebate amounts will be credited to your water billing account. For technical information on the rebate products, go to the California Urban Water Conservation Council website at: www.cuwcc.org/products_tech.lasso

High-Efficiency Toilet (HET) Rebate Program. This program offer is for a rebate up to **\$200** to replace older 3 gallons or more flush toilets with new 1.28 gallons or less high-efficiency toilets for all customers in the PCWA service area. The toilet rebate program is

partially funded by a grant from the United States Bureau of Reclamation and the Regional Water Authority. HET toilets must be purchased after June 1, 2008 to qualify. For more details and a list of qualifying toilets see: http://www.cuwcc.com/WorkArea/showcontent.aspx?id=7396

back to top

Waterless Urinal Rebate Program. This program offer is for a rebate up to \$200 to replace older high-flow urinals with new waterless urinals. In addition to saving water and sewer costs, waterless urinals are an improvement over traditional urinals in both maintenance and hygiene. This program is partially funded by a grant from the United States Bureau of Reclamation and the Regional Water Authority. For more details and a list of qualifying toilets and urinals see: http://www.cuwcc.com/WorkArea/showcontent.aspx?id=7408

back to top

Water-Wise Business Calls. Our trained technicians will come to your commercial site. They will check for leaks, conduct outdoor irrigation check ups and provide watering schedules. To schedule an appointment call PCWA Customer Services at 530.823.4850 or 800.464.0030.

Large Landscape Irrigation Survey. The Agency will fund services to complete 40 large landscape water surveys for irrigated areas over one acre. The certified Landscape Irrigation Auditor will schedule, assess, and follow up with recommendations and provide a detailed water yield analysis. To schedule an appointment call PCWA Customer Services at 530.823.4850 or 800.464.0030.

back to top

Irrigation & Agricultural Information

All questions should be directed to the PCWA Customer Services Center at 530.823.4850 or 800.464.0030.

Grower Irrigation Management System (GIMS). The program started with a small number of agricultural customers in 2005 and will be expanded in future years. Installation of soil probes will allow soil moisture monitoring. The agricultural customer is notified on a weekly basis of irrigation scheduling using the California Irrigation Management Information System evapotranspiration (ETo) data. The GIMS program is partially funded by a grant from the United States Bureau of Reclamation.

back to top

California Irrigation Management Information Service (CIMIS). In partnership with the California Department of Water Resources (DWR), the Agency operates and maintains two CIMIS weather stations in Placer County. They are supported by the Placer County Farm Advisors

and the United States Department of Agriculture, Natural Resources Conservation District.

In late 2005 the California Urban Water Conservation Council obtained Proposition 50 funding to work with DWR to study additional sites to establish local evapotranspiration (ETo) data for urban and microclimate locations. The first year, DWR was interested in the installation of 10 study sites throughout California based on suitable locations within relative proximity to an already established CIMIS station and purveyor readiness. Twenty seven interested purveyors submitted requests for forty two stations. Of these applications DWR determined that the PCWA Sunset Water Treatment Plant property would be a suitable location to install one of the ten study sites. DWR collects and analyzes the data to determine if there is a reliable correlation between this station and other reference CIMIS stations. The stations installed during this study are essentially the same as established CIMIS stations, except they are located on a surface other than grass.

CIMIS is a network of automated and computerized weather stations located at key agricultural and urban areas in the state. CIMIS collects hourly weather data including solar radiation, wind speed and direction, relative humidity, air and soil temperature, and rainfall. The stations collect local weather data and transmit to a centralized computer center in Sacramento. The data is converted to "reference evapotranspiration", which is a measure of water lost from the soil surface (evaporation) and the amount of water used by plants (transpiration).

CIMIS forms the backbone of water management programs on the demand side. CIMIS complements water supply programs such as snow surveys, reservoir capacity estimates, and rainfall estimates.

CIMIS data is a major source of ETo for many agricultural and landscape water users, farm advisors, and other irrigation specialists. Residents can use this information to determine the water needs of their plants and to create efficient irrigation scheduling. This helps maintain healthy landscapes by utilizing the correct amount of water. PCWA appreciates the partnership with DWR, which benefits its customers, the community, and the region. www.cimis.water.ca.gov/cimis/welcome.jsp

back to top

Why Should I Use Water Efficiently?

- Water is vital to life. Without it, we cannot survive.
- The amount of water on earth has not changed since the earth was created; the current supply is all we will ever have.
- Water is the foundation of our food chain; using water efficiently will ensure an adequate supply of water for irrigation.
- Saving water reduces the energy it takes to process and deliver water, reducing and conserving fuel sources.
- Saving water means having water available for recreational uses for years to come.
- Using water efficiently minimizes the effects of water shortages and helps build supplies against future drought years.
- Using water efficiently now ensures water for future generations to come.
- Proper application of irrigation water will enhance the appearance of your landscape and could prevent water waste due to run off.
- Using water efficiently relates to

saving money!

back to top

How Can I Prevent

Monitoring your irrigation controller and doing monthly irrigation system maintenance is critical. Follow the steps below to minimize or eliminate water waste.

- Once a month, monitor your irrigation system checking for leaks, improperly adjusted sprinklers, or broken pipes and valves. Shut down the system, and then make repairs.
- Read the instructions and become familiar with your automatic irrigation controller. Make a list or diagram of each station, include the run time and scheduled days. Keep this information near your controller for a quick reference.

Some soil conditions or the slope of the area to be watered will require multiple start times. If water is running off, try three short periods of irrigation instead of one long period. This will allow the water to soak into the soil and minimize or eliminate run off.

back to top

Outdoor Water- Use

Efficiency Tips

- Get some exercise and save water too! Use a broom or rake rather than water to clean driveways, sidewalks or patios.
- Water landscape only between midnight and 10 A.M. to avoid the hottest part of the day and when water is lost to evaporation. However, since the hours of 5 A.M. to 8 A.M. are peak indoor water use times, try to avoid programming your timer for those morning hours.
- Avoid operating your irrigation system on windy days, since a large amount of water will be wasted to over spray and evaporation.
- Turn off sprinkler systems when it is going to rain. After it rains, the lawns may not need to be watered for three or more days, depending on the season. Check to make sure the soil is dry before watering. A moisture

meter can help you check. Too much water keeps oxygen from the roots and plants need oxygen to grow.

- Shut down sprinkler system during the rainy season.
- Inspect sprinkler system regularly for clogged spray heads, leaks or malfunctioning valves and make necessary repairs to save water and money.

back to top

Indoor Water-Use Efficiency Tips

 Run the dishwasher and washing machine only when you have a full load.

- Fix toilet leaks. To determine if your toilet is leaking, add food coloring to the tank water and let it sit 15 minutes. If the color appears in the bowl, there is a leak.
- Turn off the faucet while brushing your teeth. Faucets can flow at 2 to 3 gallons per minute.
- Replace older toilets (pre 1992) with new high-efficiency (HET) models. The new HET toilets use less than half as much water as older models.
- Install new efficient showerheads and faucet aerators.
- Make your next clothes washing machine and clothes dryer water and energy savers. You can cut your water and energy usage in half with the new efficient models.

Frequently Asked Questions

off all interior water and any irrigation water. Take a pencil and paper and go to your water meter. Remove the meter box lid and see if the dial on the

meter is moving. If you have all your water off and the dial is moving then you have a leak. If the dial does not move, write down the meter read and wait one hour. During this time, walk your property and look for signs of a water leak. After one hour see if the number on your meter dial has moved, if it has, then you have a leak.

Rocklin Residents, Businesses can Improve Local Water Quality During the Dry Season

As the rainy season finally comes to a close for Spring 2010, it is time to consider ways Rocklin residents and business can improve water quality in our local creeks and streams during the dry season.

Did You Know?

Small changes in household chores, for example, can make a difference! Water, debris, and chemicals that go down the gutter and into the street and parking lot. Drains do not go

to a wastewater treatment plant—it all flows directly into our creeks and streams. Rocklin's waterways are salmon and trout habitat and are part of the Dry Creek and Pleasant Grove watersheds.

E Full Press Release - Rocklin Residents and Businesses Can Improve Local Water Quality During the Dry Season

What You Can Do

Rocklin residents and businesses can help keep our creeks & streams clean. Following are ways to participate in keeping Rocklin's waterways clean:

Conserve Water

- Use automatic irrigation systems.
- Water landscaping in the early morning or after dark.
- Be sure not to over-water.
- Plant native and drought-tolerant plants.

Use Landscaping Chemicals Carefully

- Apply lawn/landscape chemicals per package instructions.
- Do not over-water after using chemicals.
- Choose "green" alternatives for controlling pests, such as lady bugs and non-toxic chemicals.

Properly Dispose of Waste

- Always throw garbage in a designated receptacle.
- Sweep driveways and sidewalks instead of hosing them off.
- Never rinse yard-care equipment or flush debris into the gutter.
- Never flush paint, household chemicals, solvents, or similar hazardous household waste into the gutter.
- Dispose of hazardous household waste by taking it to a City sponsored <u>Universal Waste</u> event or to the <u>Materials Recovery Facility (MRF)</u>.
- Properly dispose of pet waste in a garbage can or flush it down a toilet.
- Re-use plastic bags or purchase pet-waste bags from your local pet store.

Recycle

- In Rocklin, you can throw recyclables directly in the garbage—no need to sort or separate! Recyclables are diverted out of the landfill at the MRF.
- Do not throw used household batteries into the garbage. Bring batteries to a local collection site and look for the green collection tubes.

Properly Drain Swimming Pools

Do not drain swimming pools or spas directly into the gutter. Even small amounts of chlorine can upset the balance of plant and animal life in creeks and streams.

Do Even More

- Volunteer at Rocklin's annual Community Service Day.
- Participate in annual Creek Week activities.
- Volunteer any time of year by contacting Dara Dungworth at 916.625.5160 or at dara.dungworth@rocklin.ca.us.
- Adopt an Inlet (City of Rocklin program coming summer of 2009).
- Visit the STAR ECO Station's Storm Drain Exhibit (coming summer of 2009).
- Report illegal dumping by calling the Public Works Department at 916.625.5500 or by sending a message through the City's webpage.

Help the environment

Reader Input

A lot of people think that the water that goes down our storm drains will go to a water treatment plant to be cleaned. Not true!

We have two separate systems. The water that we put in the storm drain will go directly into creeks and could hurt our wildlife. However, our household water will go to a water treatment plant to be cleaned before it's put back into the river. That's why we should be careful of what we wash down our storm drains.

There are several ways we can help. We can use gravel bags around storm drains so it will block leaves and debris from going in. We can wash our cars on the grass, and use biodegradable soap. We can keep from over watering our yards, and washing off the fertilize and other chemicals we put on our yards. We can keep litter from going down the drain. We could help the environment.

runoff flow untreated into the City's creeks and open space areas.

As you may know, another way that Rocklin residents can help is to Adopt-an-Inlet to monitor and maintain (sweep up leaves and debris in the gutter) a storm drain inlet on their street. More information is available on the City's Stormwater Pollution Prevention webpage at: http://www.rocklin.ca.us/government/works/pollution/default.asp.

Thank you so much Collin!!!! You obviously care about your community, wildlife and the ocean. As you know, stormwater is never treated and eventually flows to the ocean. That is why it is imperative that we protect stormwater inlets, never dump chemicals, fertilizers, oil or trash into gutters...as all of it eventually ends up in the ocean where it makes a toxic soup, develops into dead zones ,making ocean creatures and even humans sick when they come into contact with it. What we do here affects everyone down stream. By all of us being conscious of our behaviors and becoming environmental stewards we can have a great impact on the health of our community, its green areas and wildlife and all other communities on the way to the ocean.

If you haven't done so already, please visit the STAR ECO Station in Rocklin to learn more about stormwater pollution by touring our facility and going through our interactive Storm Drain Exhibit. Its pretty cool. Again Collin, thank you for educating the community on stormwater quality and environmental protection. Its kids like you that are gonna ROCK THE WORLD into an awesome planet!

Keep storm drains clean

Reader Input

Please don't throw anything down our storm drains. It pollutes our fish, we will have bad water and it pollutes our planet. I went to a tree house and looked down and saw so much trash and I thought, "OMG! That's a lot of trash" and it was in a wetland! So don't throw trash down the storm drains.

Watch what goes in drain

Reader Input

I think all people should watch what they put or wash down the storm drain. Sometimes bad things go down the drain such as zinc and other heavy metals, harmful chemicals, gas, oil, and garbage. All of that stuff goes directly to the watershed and wetlands.

When it goes down the drain it just goes to the ocean. The poisons will get into our food chain. A fish will eat the toxins in it, and ther a bird will eat the fish and the bird's eggs won't be as strong to provide for the baby bird so then it will die.

Some people will wash their car on the driveway and that's not OK because the soap will go to the ocean and harm all of the animals. People usually wash the barbecue grill on the drain and with harsh chemicals. You should wash your car at a car wash, and wash your grill on the grass. Another thing you can do is go online and adopt a drain to help keep it clean.

If we take care of our eco system then other people will too. Please be careful what you put down your storm drain.
